

D7113

USB Interface Module

Description

The D7113 USB Interface Module is a plug-in expansion module designed for the D7111 full digital conference system. It adopts a plug-in card architecture, allowing flexible and optional configuration based on system requirements. Equipped with 4 USB ports, each supporting up to 16GB USB flash drives, the module enables convenient music playback and file storage functions. With its compact design and easy installation, it ensures reliable performance and seamless integration into the conference system, providing efficient USB access for multimedia applications.

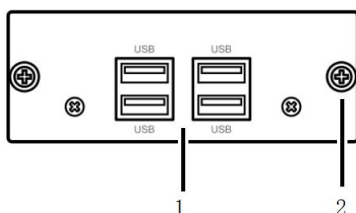

Features

- Plug-in card module design for optional and flexible configuration.
- 4 USB ports, each supports up to 16GB USB flash drive
- Supports music playback and file storage

Specifications
